PROFESSIONAL SUMMARY

Results-driven QA Automation Engineer with 2+ year of experience at IBM, specialising in building security regression frameworks, end-to-end test automation, and CI/CD pipeline integration. Proven ability to automate 70–80% of Regression testing workflows using TypeScript, significantly reducing manual effort. Hands-on expertise across Selenium, Playwright, Postman, and Jenkins. ISTQB certified with a strong foundation in both functional and security testing. Seeking an SDET or QA Automation role in Bangalore to drive quality engineering at scale.

PROFESSIONAL EXPERIENCE

Quality Engineer— IBM(Client: Bell Canada)

Mar 2024 – Present

- Designed and developed High-Level (HLTC) and Low-Level Test Cases (LLTC) to enhance test coverage and optimise execution efficiency across complex enterprise workflows.
 - Led end-to-end test execution for AutoPay and OneBill Migration Projects, ensuring 100% on-time delivery across all agile sprints; also spearheaded execution for multiple major and minor releases, including high-stakes events like Black Friday server readiness and the iPhone 16 launch, with zero critical regression failures under peak-traffic conditions.
 - Built a Security Regression Framework in TypeScript, automating 70–80% of security testing processes and reducing manual security validation effort by 60%.
 - Performed security testing covering input sanitisation, authentication workflows, and data encryption protocols, reducing the vulnerability escape rate to production.
 - Executed API testing using Katalon and Postman to validate RESTful services — covering response integrity, status codes, auth mechanisms, and backend integration.
 - Automated CI/CD pipelines using Jenkins by scheduling, managing, and triggering test scripts, improving build reliability and deployment consistency across all environments.
 - Identified and reported 320+ critical defects across 16+ sprints via JIRA, and built multiple JIRA dashboards to track and visualise release-wise execution status; collaborated with cross-functional dev teams to drive timely resolution.
 - Played a key role in deployment and post-deployment validations, contributing to smooth production releases with zero critical regression failures.
 - Interpreted Entity Relationship Diagrams (ERDs) and UI mock-ups to design comprehensive functional test cases aligned with business requirements.
-

TECHNICAL SKILLS

Programming Languages: Python, Java, TypeScript

Test Automation: Selenium, Playwright, TestNG, Cucumber (BDD)

API Testing: Postman, Authentication & Status validation, Soap UI

CI/CD & DevOps: Jenkins, Gitlab, CI/CD pipeline automation, NM1

Security Testing: Input sanitisation, Authentication workflows, Data encryption, Regression frameworks

Database: MySQL, SQL query writing

Project Management: JIRA, Agile/Scrum, ERD interpretation, UI mock-up analysis, CSM

CERTIFICATIONS

- [AWS Cloud Practitioner — Amazon Web Services, 2024](#)
- [ISTQB Foundation Level — International Software Testing Qualifications Board,2024](#)
- [APIU Certified API, REST and Microservices Tester - APIU ,2025](#)
- [Associate Data Practitioner Certification,2025](#)

EDUCATION

Bachelor of Technology, Computer Science

M S Ramaiah University of Applied Sciences, Karnataka

2019 – 2023

CGPA: 8.45 / 10
